(57)**ABSTRACT**

A display device includes: a substrate that is flexible; a protruding portion having a side surface at least partially including a reverse-tapered surface on the substrate; and a sealing layer containing a self-repairing material. Furthermore, the display device includes a recessed space formed with the side surface of the protruding portion and a surface on which the protruding portion is formed. Moreover, the sealing layer convers: the side surface and an upper surface of the protruding portion; and a lower surface of the recessed space, and the recessed space has a side surface at least partially including the reverse-tapered surface.
