(57) **ABSTRACT**

A server performs a method of controlling the manipulation of a playlist that includes a queue of media items to be played. The method includes authorizing a first electronic device to control the manipulation of the playlist and generating the playlist based on a set of media preferences associated with the first electronic device. The method further includes, after authorizing a second electronic device to manipulate the playlist, receiving, from the second electronic device, a request to update an order of media items in the playlist and generating an updated order of media items in the playlist in response to receiving the request from the second electronic device.
