Publication Classification

(57)   **ABSTRACT**

A method for feeding back a hybrid automatic repeat request acknowledgement (HARQ-ACK) and a terminal device. The method comprises: a terminal device receives a first physical channel transmitted by a network device using a first HARQ process, the first HARQ process corresponding to a disabled state; the terminal device generates a first HARQ-ACK codebook, the first HARQ-ACK codebook comprising a first HARQ-ACK feedback bit corresponding to the first physical channel, or, the first HARQ-ACK codebook comprising no first HARQ-ACK feedback bit corresponding to the first physical channel.

Terminal Device		Network Device

S210. The terminal device receives the first physical channel transmitted by the network device using the first HARQ process, wherein the first HARQ process corresponds to a disabled state

S220. The terminal device generates a first HARQ-ACK codebook, wherein the first HARQ-ACK codebook includes the first HARQ-ACK feedback bit corresponding to the first physical channel, or the first HARQ-ACK codebook does not include the first HARQ-ACK feedback bit corresponding to the first physical channel
