(57) **ABSTRACT**

A system and method for complex IT process annotation and tracing, analysis, and simulation, comprising at least a generative simulation platform, optimization engine, and metric engine, which is able to model and simulate a variety of simulations and develop adaptive models, and can be used more specifically for IT/OT infrastructure and technology enabled process simulation to manage performance and risk in a network enabled business infrastructure, perform load-testing and quality control tests, and determine the overall health to known attacks and potential interruptions as a system or network or process topography changes and updates.
